## How Does it Work?

Permethrin damages insects' nervous systems, causing them to immediately drop off. The treatment is effective against many crawling and flying insects, including mosquitos, ticks, ants, midges, chiggers, and flies.

## Is it Proven?

This non-flammable solution is safe for use with FR clothing and lasts for 50+ launderings. It's also been used by the US Army for more than 20 years, as standard issue for the Marines since 2007, and is recognized by the Environmental Protection Agency (EPA) and Centers for Disease Control and Prevention (CDC) as a safe and effective method of preventing insect-transmitted diseases.

**Repellents containing DEET, on the other hand, are highly flammable and should never be used with FR clothing.**

## What Items are Available?

Factory permethrin treatment is brought to Tyndale by Frontline Fabrics (FLF)—makers of Tyndale's exclusive line of FRMC® inherent FR fabrics.

The treatment, which protects against insects for 50+ launderings, is available on an assortment of Tyndale FRMC® garments for an additional charge, with 10-week standard delivery.
